

BLACK POINT

A flexible exhibition stand system

For group exhibition zones, pavilions, and individual stands.

StandPoint

One system. A distinct space for every exhibitor.

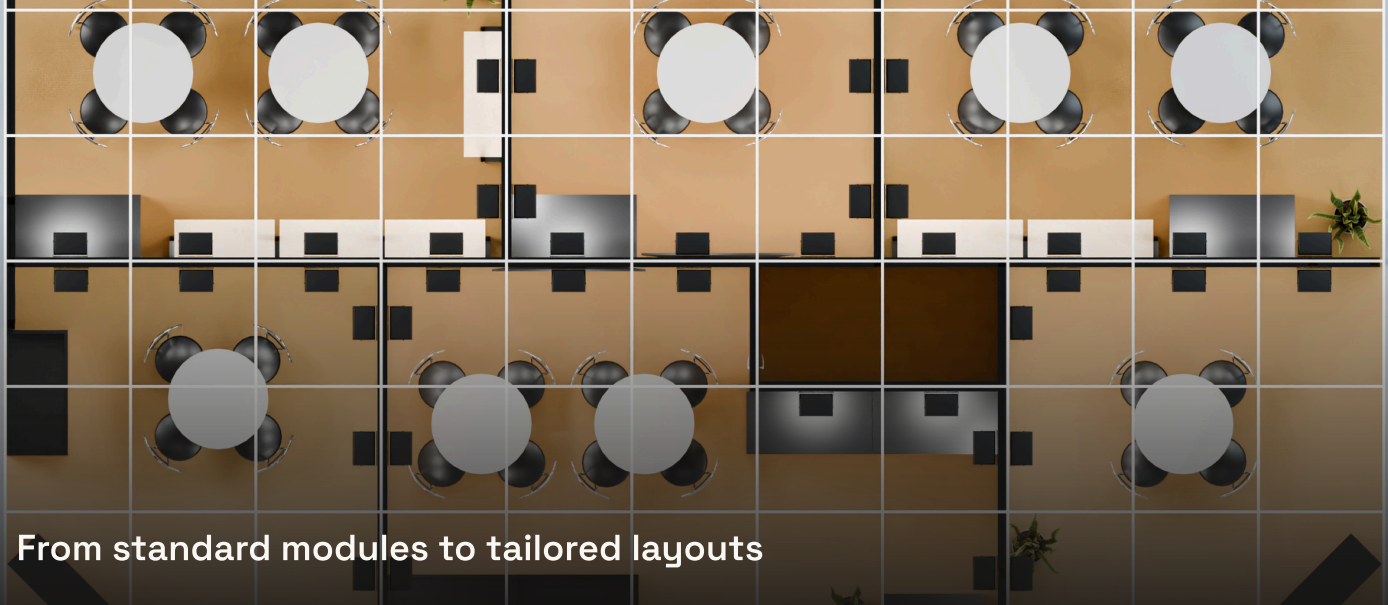

Black Point is a flexible exhibition stand system that combines a standardized structural base with individual branding and tailored stand configurations.

It can be used to create a unified exhibition zone or be adapted to a single stand of any size and configuration.

A consistent architectural language creates a recognizable environment, while each exhibitor retains its own identity.

-
- group exhibition zones
 - national pavilions
 - collective stands
 - individual exhibitor stands
 - zoning of large exhibition areas

From standard modules to tailored layouts

Black Point can be implemented as a standardized build with repeatable modules or adapted to the specific layout of an exhibition zone.

The size, shape, and equipment of each stand are defined according to the exhibitor's needs. The system works with linear, corner, island, and other stand configurations.

A standardized base does not limit the design — it makes it manageable.

INDIVIDUAL BRANDING

Designed around the brand

Each stand can be customized according to the exhibitor's corporate identity or the overall concept of the event.

Panel colors and textures

Printed graphics and vinyl wrapping

LED screens and multimedia

Custom counters and facades

**Individual identity within a
unified architectural system.**

Everything an exhibitor needs

Each stand is equipped to meet the exhibitor's functional needs.

- information and reception counters
- showcases
- open and closed shelving
- display surfaces
- meeting tables and chairs
- bar tables and stools
- enclosed storage rooms
- cabinets and storage areas
- lighting, power outlets, and electrical connections
- TVs and LED screens
- decorative plants and other elements according to the brief

Equipment can be standardized across the entire zone or selected individually for each exhibitor.

Black Point in practice

A smart solution
designed for reuse

The main **Black Point** elements are designed for reuse across different projects, configurations, and exhibition spaces.

- reusable core elements
- adaptation to different areas and layouts
- fewer single-use materials
- predictable quality and budget

Black Point — a standardized system with the look of a custom build.
